

Preschool Screening

Does my child have the skills needed to be successful in school? Is my child developing speech, moving, and thinking skills like other kids his/her age?

Developmental preschool screening gives information about how your child uses his/her body, knowledge of basic concepts, and your child's use of language that have proved important in predicting a child's success in the classroom. Screening helps to identify if your child's skills are appropriate for his/her age or if further testing may be needed. Hearing and basic health/vision screening will also be available. This information can help you plan your child's education and promote a positive start to his/her school experience. Preschool screening is available for children 3-5. Children aged birth to 36 months is available upon request. Appointments needed prior to screening date.

To make your child's appointment, please call **764-2579**.
